Certification: UL/C-UL 1069; CE.

DESCRIPTION

The R4K14SA is a single bed station with the added capability of placing an emergency call. The station also allows patients and staff to place different call-in priorities, depending on their requirements, to the assigned console(s). The bed stations can interface with call cords and entertainment speakers to initiate calls, provide entertainment control and allow intercom to the console over the station speaker.

The bedside station is connected to its associated corridor light or domeless room controller and is continually supervised for station presence. Through programming, a "Trouble" message call can annunciate at the associated console(s) when the station is removed from the system.

ASSOCIATED EQUIPMENT

CLA222, CLA244 – Audio Corridor Lights

DCA200, DCA216 – Audio Domeless Room Controllers

Pillow Speakers

CCDIN – Call Cord
