

MODEL: R5K APPLICATION MODULE

R5KMRPT

FEATURES

- Customizable Activity Boards that allows staff members with proper access rights to view the nurse call activities within a facility in real time
- Provides five different reports that cover in summary or detail all the historical staff response goals and nurse call activities from units
- Robust recurring reporting mechanism that allows for any of the five reports to be configured, generated and delivered automatically via email
- Nurse may quickly alert other staff that a patient requires assistance or service
- Patient management module
- Administration module that allows for user management, activity board management and overall settings of the system to be maintained

DESCRIPTION

The Responder 5000 Application Module is web based software with several different modules that allow facilities to enhance the Responder 5000 Nurse Call System in multiple ways.

The Application Module provides customizable Activity Boards to give caregivers for a clear view of the Responder 5000 nurse call activities in real time on the unit. It provides room and patient management tools for operational support.

A reporting module provides the longer term picture of the facility and the way nursing and patient's requests are met. Finally, the administration module provides tools for user management and overall customizations for the application.
