

MODEL: R5K TELEPHONE INTERFACE

R5KMSIP

FEATURES

- Enables on-the-go nurses to talk directly with a patient via a wireless phone
- VoIP telephony integration via SIP protocol offer the fastest staff response times to patient calls
- Nurse may quickly alert other staff that a patient requires assistance or service
- Allows hospitals to integrate their current wireless phones or new SIP-enabled smartphones with Responder 5000
- SIP trunking to IP PBX or VoIP Gateway (DECT/analog support)
- SIP registrar with optional Responder SIP Server

DESCRIPTION

The Telephone Interface is a licensed software application that runs on the MSC providing a true Session Initiated Protocol (SIP) telephony integration. With this interface, calls placed in Responder 5000 can be routed to a designated nurse with the patient's call information displaying on the phone. A staff member can then simply answer the patient's call and converse directly with the patient over the associated Responder 5000 patient station. Depending on patient requirements and system configuration, the nurse, using their telephone dialpad, may set a service or reminder to alert another team member to go into the patient's room for

a specific need. A nurse can also dial into the Responder 5000 system when they are notified of a patient's call (via pocket page, staff follow tones, etc.) and speak directly with the patient.
